A QUALITY PRODUCT • A QUALITY RANGE • A QUALITY NAME

Excellence from the water

Vulcan has been at the leading edge of the water heating market for over 50 years. Now, as part of Southcorp Water Heaters Australia, who are one of the world's largest manufacturers of water heaters, Vulcan has become known for quality, reliability and service. We use the most advanced materials and manufacturing methods and our quality management system conforms with the International Organisation of Standardisation with ISO 9001 Quality Certification.

A model to suit every application.

A wide range of models makes it easy to find the right Vulcan Electric water heater for the way you live.

There is a size for every domestic requirement with 14 models; capacities range from 25 litres right up to a huge 425 litres.

Every one of these models is suitable for either indoor or outdoor installation and all are fully weatherproof.

A choice of single element or twin element models gives real flexibility and the heating elements are easily interchangeable. They operate on a standard 220V~240V electricity supply.

The Vulcan Advantages.

Vulcan's Mains Pressure design ensures a steady flow of hot water, even if other taps are turned on. Your shower won't turn into a trickle of luke warm water just because someone else is using hot water.

Easy to transport and simple for your plumber to install, Vulcan Electric water heaters provide rapid heating to ensure plenty of hot water... when you want it.

All Vulcan water heaters are designed to Australian Standards. They provide a reliable, efficient supply of hot water combined with a quality of manufacture which ensure they will be a valuable member of your household for many years.

Water heating experts

We recommend your electric water heater be installed by a qualified plumber and electrician.
Units should not be installed outdoors where there is permanent snow in winter.

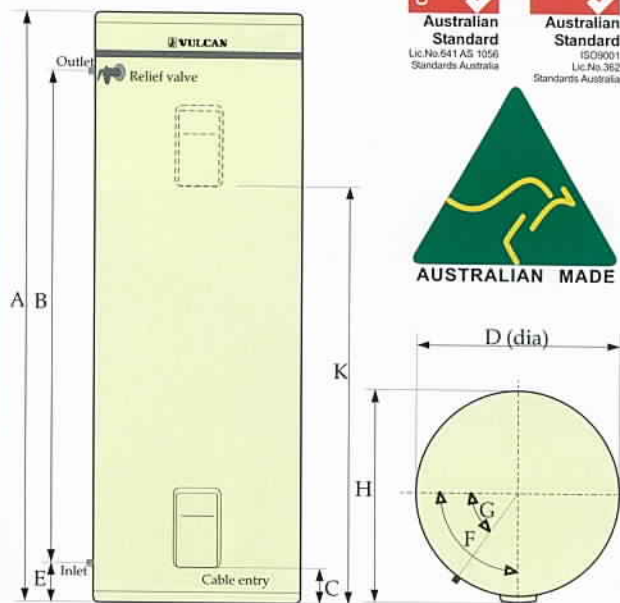

When selecting the right Vulcan model for your needs remember these key points:

- Always size for the future
- How many people are in your family now?
- Is your family size expected to increase?
- If you have children, remember, teenagers use a lot of hot water!
- A dishwasher, spa bath or washing machine connected to the hot water supply should be counted as another person.
