

# **BROEN BALLOFIX® Lockable** For protection of water ressources

BROEN Building Installations offer professional valve and fitting systems for any plumbing installation, sold via professional plumbing wholesalers. We deliver complete system solutions based on a broad range of BROEN products and products from our sister companies in Aalberts Industries.

We are by your side all the way; a competent sparring partner with broad experience and professional expertise across a wide spectrum of disciplines. We deliver reliable installations and work continuously to create new advantages for you.

### **Protection of water resources**

BROEN BALLOFIX® Lockable is a new type in the well known BALLOFIX® product range.

BALLOFIX° Lockable is designed specially to protect against unwanted opening/closing of the water supply, for instance schools, institutions and public buildings.

The top part of the valve is designed with a tamper proof lock, which must be operated by a key. The key can only be removed from the lock in closed position. The lock is equipped with a master key which ensures that it is only necessary with one key to several locks.

After removal of the top, the valve can be operated by means of an Allen key (hexagon or pentagon) or a butterfly metal handle.

#### Application

BALLOFIX® Lockable is recommended for use in connection with water meters for the protection af water resources.

BALLOFIX<sup>®</sup> Lockable provides an excellent solution for the water authorities in order to solve problems with non-payment of water rates.

BROEN INTELLIGENT FLOW SOLUTIONS
