Warranty	60

Due to design improvements, product images in the catalog do not always reflect the most current design detail.

*Type of meter inlet valve & outlet valve

- V** = inlet key valve & no outlet valve
- VV** = inlet key valve & outlet key valve
- VVG** = inlet key valve & compression outlet valve
- VH** = inlet key valve & outlet single check valve
- Δ VHH** = inlet key valve & outlet cascading dual check valve
- **VHC** = inlet key valve & outlet cartridge dual check valve
- VB** = inlet ball valve & no outlet valve
- ***VBB** = inlet ball valve & outlet ball valve
- VBG** = inlet ball valve & outlet compression valve
- VBH** = inlet ball valve & outlet single check valve
- Δ VBHH** = inlet ball valve & outlet cascading dual check valve
- **VBHC** = inlet ball valve & outlet cartridge dual check valve

T = "T" in front of the catalog number indicates a tandem style setter

* Coppersettters can be ordered less valves by omitting the above letters from the catalog number.

** Cartridges with enhanced chlorine/ chloramine resistance are available. Add "CR" to end of alpha code.
Example: VHC**CR**72-15W-44-33-NL

*** The 5/8" port angle ball valve is a one-way directional valve designed for the inlet side of the meter and should not be used as a customer shut-off on the customer side of the meter.

Meter size

- 1** = 5/8" meter
- 2** = 5/8"x 3/4" meter
- 3** = 3/4" meter
- 4** = 1" meter
- 6** = 1-1/2" flanged meter
- 7** = 2" flanged meter

Ford Coppersettters Numbering System

Setter height (Approximate)

- 7** = 7" high setter
- 8** = 8" high setter
- 9** = 9" high setter
- 10** = 10" high setter
- 12** = 12" high setter

Setters above 12" are made in 3" increments

Service line connection size

- 1** = 1/2"
- 3** = 3/4"
- 4** = 1"
- 5** = 1-1/4"
- 6** = 1-1/2"
- 7** = 2"

Inlet **Outlet**

5/8" thru 1" Coppersettters only

W = Angle Meter Ball and Key Valves are with Padlock Wing

Compression valve without Padlock Wing

1-1/2" and 2" Coppersettters only

B = Bypass

HB = High Bypass

BHC = Bypass with dual check (1-1/2" and 2" only)

HBHC = High Bypass with dual check (1-1/2" and 2" only)

V72 - 12W - 44 - 33 - G - NL

Type of setter

- 7** = 70 series coppersetter with horizontal inlet and outlet
- 27** = 270 series coppersetter with detachable pack joint assemblies for 5/8", 5/8" x 3/4", 3/4" and 1" meter
- 8** = 80 series coppersetter with vertical inlet and outlet
- 7-8** = 70-80 series coppersetter with vertical inlet and horizontal outlet
- 9** = 90 series coppersetter with horizontal inlet and outlet for 5/8", 5/8" x 3/4", 3/4" and 1" meter
- 4** = 40 series resetter to use when meter connections are available in existing services
- 3** = 30 series flexible resetter to use when meter nuts are available in existing services for 5/8", 5/8"x3/4", 3/4" and 1" meter

Inlet **Outlet**

Service line connection type

- 1** = Double Purpose Union Swivel (FIP for 1-1/2" & 2" Coppersettters)
- 2** = Flare Copper
- 4** = Pack Joint for CTS
- 6** = Pack Joint for PE pipe
- 7** = Pack Joint for PVC pipe (Schedule 40 & 80)
- 8** = Male Iron Pipe Union Swivel
- F** = Integral Female Iron pipe (Female Iron Pipe Union Swivel may be used when Integral FIP is not available.)
- M** = Integral Male Iron Pipe Thread

Options

- G** = Grip nut compression fitting instead of pack joint nut. Available with CTS (3/4" - 2") and PE Pipe (3/4" & 1")
- Q** = Quick Joint
- TP6** = 1-1/2" Integral Test Port on Dual Check Valve for 1-1/2" and 2" Coppersettters with a shut-off valve below the Dual Check Valve
- TW-Q** = CTS Quick Joint with Tracer Wire Terminal Ultra-Tite available with 3/4" and 1" CTS and PE Pipe (contact factory for pricing)
- U** = Ultra-Tite available with 3/4" and 1" CTS and PE pipe where listed

90 Series Options

- A** = 15" Outlet Extension
- B** = 18" Outlet Extension
- C** = Bolted Clamp
- E** = Brace Eye
- F** = 15" Outlet Extension and Bolted Clamp
- H** = 15" Outlet Extension and Brace Eye
- J** = 18" Outlet Extension and Bolted Clamp
- K** = 18" Outlet Extension and Brace Eye

Δ Angle cascading dual check valve contains 3/4" internal components. This valve meets the ASSE flow requirements of a 1" valve. For a full port valve order the cartridge style check valve.

Note: 5/8" x 3/4", 3/4" and 1" setters with angle ball valve will have a reduced port that usually provides suitable water flow. A full port ball valve is available at an additional cost; add "-FP" to end of catalog number and contact the factory for pricing.

▲ Ford Meter Box no-lead brass products manufactured from UNS/CDA No. 89833 alloy shall contain no more than 0.25% total lead content by weight. United States federal and state laws allow the use of products manufactured from UNS C83600 85-5-5-5 brass alloy for only non-potable water systems within the United States.

Parties responsible for monitoring and maintaining proper water system design must exercise full responsibility in understanding and upholding the full intent and scope of applicable lead laws.

Information

Features of Ford Coppersetters, Linesetters and Resetters

Valve Options - The valve on the riser of a Coppersetter, Linesetter or Resetter serves as a curb stop. An inverted key valve is available; however, angle ball valves and full port angle ball valves may be specified and provide many advantages. Padlock wings are standard on all Ford meter valves (key and ball styles). Ball Valves have an option for 360° rotation of the tee-head; insert "R" into the catalog number (Example: VB72-7WR-11-33-NL). 5/8" x 3/4", 3/4" and 1" Coppersetters with angle ball valve will be reduced port, unless otherwise specified. (Add "-FP" to the catalog number for full port.)

Angle Ball Valve

All Ford Meter Setters are assembled using lead-free solder.

Coppersetters, Linesetters, and Resetters are complete meter setting devices, easily installed and providing these permanent benefits.

- Meter reading is expedited
- Pressure loss is minimized
- Meter changes are quick and do not disturb the service line
- Provides cost savings in couplings, valves, pipe fittings and labor
- Makes retrofitting a check valve for backflow prevention quick and easy

Coppersetters place meters 7" or more above the service line. Linesetters place meters 3" above the service line. We offer a wide variety of valve and service line connections. Resetters attach to old meter connections to raise and improve meter settings.

Dual Angle Check Valves are available on Ford setters and resetters for meters through 2". Cartridge Style Dual Angle Check Valves are available through 1". Located at the outlet of the meter, they are practical and inexpensive solutions to several potential backflow problems.

Pit flooding during meter changeouts is prevented, as well as hot water damage to meter chambers. In the event of a utility system pressure drop, some protection is afforded from cross-connection contamination, and raw water infiltration from customer well systems is minimized.

Checks are spring loaded, made of brass, plastic and stainless steel construction, and have a removable top or back cap for in-line maintenance purposes.

A single angle check valve can also be specified and ordered on any Ford Setter or Resetter. Check Valves are available as outlet valves. Ford is THE choice of Dual Checks for Water Utilities. Only Ford offers these important advantages:

- The first full line of ASSE approved Dual Checks designed for use at the water meter
- The first full line of ASSE approved Dual Checks with removable access caps for easy maintenance
- The first ASSE approved Dual Checks available as integral parts of Coppersetters, Resetters and Yokes

Cartridge Dual Check Valve

Saddle Nuts - This feature provides supporting lips on the coupling nuts to hold the meter when it is lowered into position. Threads in the nuts are automatically lined up with the meter spuds for easy starting. Gaskets are held in place and prevented from dropping while the nuts are started. Saddle nuts save time, trouble and gaskets with each meter change.

Saddle nuts are included with all 5/8" through 1" Ford Coppersetters and Resetters (except Tandem Setters) as a free and valuable bonus. Support brackets included on 1-1/2" and 2" Coppersetters and Resetters provide similar advantages by holding the flanged meter and gasket in place while the flange bolts are inserted and tightened.

A **Compression Valve** is available on Coppersetters. It is normally placed at the outlet and is convenient for customer operation.

Compression Valve

A **Drain or Test Valve** for checking meter performance or draining service lines can be included at the outlet of plain or single valve Coppersetters and Resetters. The drain valve consists of a bronze body with a bronze screw seating on a plastic washer to prevent leakage.

Drain or Test Valve

Information

Setter Service Line Connections

Coppersettors are available with connections for a wide range of types and sizes of pipe and tubing. Note the convenience of Pack Joints, Grip Joints, Quick Joints and Ultra-Tites for existing services and for many new settings. Both Coppersettors and Resettors can be tailored to special conditions. Contact factory for assistance in creating a setter that will fit your needs.

Pack Joint, Quick Joint, Grip Joint and Ultra-Tite Compression Connections

Pack Joint compression coupling for Copper, PET, PEP and PVC

Quick Joint compression coupling for Copper, PET and PEP

Grip Joint compression coupling for Copper, PET and PEP

Ultra-Tite compression coupling for PET and PEP

Double Purpose and Flare Connections

The Double Purpose Coupling as used for connection to male iron pipe threads

The Double Purpose Coupling as used for flare-type connection to copper

Flare Joint for connection to copper tubing

Swivel Iron Pipe Thread Connections

Union Nut and FIP Swivel Assembly for connecting smaller Coppersettors to male iron pipe threads

The Male Swivel is convenient for connecting to FIP adapters/valves

MIP Connections

Integral Male Iron Pipe Thread (No Swivel)

270 Series Compression Connections

Pack Joint compression coupling for Iron Pipe

Pack Joint compression coupling for Copper, PET, PEP and PVC

GASKETS

Rubber gaskets are furnished with all Coppersettors. Leather and composition gaskets are available upon request.

GASKETS FOR COPPERSETTERS LINESETTERS - RESETTERS

CATALOG NUMBER	MATERIAL	METER SIZE	DIAMETER		THICKNESS

The Ford 70 Series Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meters

Ford 70 series Coppersetters are designed to be a complete, ready-made meter setting. They require only two pipe joints to install and will connect to horizontal service lines. 70 Series Coppersetters are made in various heights to place the meter at the proper elevation for convenient reading and servicing. Correct hydraulic design ensures minimum pressure loss; copper and brass construction provides a lifetime of satisfactory service.

To order: Select one catalog number component from each of the three charts on pages 8 through 11 to arrive at the complete Coppersetter catalog number. Selection order of components:

1. Meter size and valve type page 8
2. Coppersetter height page 8
3. Service line connections pages 9 -11

VBHC71**	VBHC72**	VBHC73**	VBHC74**	Ball	● Cartridge Dual Check

* Compression valve does not have padlock wing.

** 70 Series Coppersetters with cartridge dual check valve have a 9" minimum height for 5/8" and 5/8" x 3/4" meters, and a 12" minimum height for 3/4" and 1" meters.

*** The 5/8" port angle ball valve is a one-way directional valve designed for the inlet side of the meter and should not be used as a customer shut-off on the customer side of the meter.

▼ Angle cascading dual check valves contain 3/4" internal components. This valve meets the ASSE flow requirements of a 1" valve. For a full port valve, order the cartridge style check valve.

● Cartridges with enhanced chlorine/chloramine resistance are available. Add "CR" to end of alpha code. Example: VHC**CR**72-15W-44-33-NL

Note: Setters with angle ball valve will be reduced port unless otherwise requested. Reduced port valves usually provide suitable water flow. (Add "-FP" to the catalog number for full port.)

Meter Valve Options for 70 Series Coppersetters: Seal Wire Hole in Inlet Valve, Seal Wire Hole in Check Valve

Δ Double Purpose Union Swivels will accommodate male iron pipe threads or flare copper.

NOTE: Ford Pack Joints for PVC are recommended for Schedule 40 and Schedule 80 pipe only.

The Ford 270 Series Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meter Size

Requires removable Pack Joint Assembly (Pack Joint Assemblies ordered separately)

The 270 Series Coppersetters, with removable Pack Joint Assemblies, save time and expense when water meters are set outside in existing service lines. Threading of old iron pipe or flaring of brittle copper tubing is not required. Pack Joint Assemblies are interchangeable and available for all types of service pipe; a great help in metering programs where conditions are unknown until the pits are dug.

To order: Select one Catalog Number component from each of the two charts on page 14 to arrive at the complete Coppersetter Catalog Number. Additionally, removable Pack Joint Assemblies are available and are ordered and priced separately. Selection order of components:

1. Meter size and valve type page 14
2. Coppersetter height page 14
3. Service line connections (removable Pack Joint Assemblies). page 15

The Ford 270 Series Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meter Size

Requires removable Pack Joint (Pack Joint Assemblies ordered separately)

Pack Joint Assemblies
(ordered separately)

Installation

Quick and simple installation involves cutting out a section of service line about 1/2" longer than the Coppersetter bar, cleaning about 3" of pipe ends and slipping Pack Joint Assemblies onto pipe (as shown in photo above). The Pack Joint Assemblies are then screwed tightly onto the bar, and the nuts tightened and locked into place.

The Ford 270 Series Coppersetter

* Compression valve does not have padlock wing.

** 270 Series Coppersetters with cartridge dual check valve have a 9" minimum height for 5/8" and 5/8" x 3/4" meters, and a 12" minimum height for 3/4" and 1" meters.

*** The 5/8" port angle ball valve is a one-way directional valve designed for the inlet side of the meter and should not be used as a customer shut-off on the customer side of the meter.

▼ Angle Cascading Dual Check Valves contain 3/4" internal components. This valve meets the ASSE flow requirements of a 1" valve. For a full port valve, order the cartridge style check valve.

• Cartridges with enhanced chlorine/chloramine resistance are available. Add "CR" to end of alpha code. Example: VHCCR72-15W-NL

Note: Setters with angle ball valve will be reduced port unless otherwise requested. Reduced port valves usually provide suitable water flow. (Add "-FP" to catalog number for full port.)

Meter Valve Options for 270 Series Coppersetters: Seal Wire Hole in Inlet Valve, Seal Wire Hole in Check Valve

The Ford 80 Series Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meter Size
Vertical inlet and outlet

The Ford 80 Series Coppersetter offers economy and flexibility by allowing the utility to construct meter pit risers from various service line materials, cut to any height. The 80 Series setters connect directly to these risers, without elbows or pressure reducing bends, by means of a wide variety of service line connections. All standard Coppersetter valve options, including Dual or Single Check Valves, are available on the 80 Series.

To order: Select one catalog number component from each of two charts on pages 18 and 19 to arrive at the complete Coppersetter catalog number. Selection order of components:

1. Meter size and valve type page 18
2. Service line connections page 19

♦ Quick Joint is available. Add "-Q" to the catalog number.

▶ Ultra-Tite is available. Contact factory for more information.

Δ Double Purpose Union Swivels will accommodate male iron pipe threads or flare copper.

‡ 81 and 82 Series Coppersetters with the indicated service line connections have a (vertical) brace eye. (Not available with Quick Joint or Ultra-Tite.)

Note: Ford Pack Joints for PVC are recommended for Schedule 40 and Schedule 80 pipe only.

The Ford 70-80 Series Angle Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meter Size
Vertical inlet and horizontal outlet

Standard service installation in some water utilities calls for tubing from the main to the curb meter setting to be relatively deep, and the pipe from the meter box to the house to be shallower. The Angle Coppersetter has a vertical inlet and horizontal outlet. It can be furnished with a variety of valves as described below.

To order: Select one catalog number from each of the two charts on pages 22 and 23 to arrive at the complete Coppersetter catalog number. Selection order of components:

1. Meter size and valve type page 22
2. Service line connections page 23

The Ford 70-80 Series Angle Coppersetter

* Compression valve does not have padlock wing.

** 70-80 Series Coppersetters with cartridge dual check valve have a 9" minimum height for 5/8", 5/8" x 3/4" meters, and a 12" minimum height for 3/4" and 1" meters.

*** The 5/8" port angle ball valve is a one-way directional valve designed for the inlet side of the meter and should not be used as a customer shut-off on the customer side of the meter.

▼ Angle Cascading Dual Check Valves contain 3/4" internal components. This valve meets the ASSE flow requirements of a 1" valve. For a full port valve, order the cartridge style check valve.

- Cartridges with enhanced chlorine/chloramine resistance are available. Add "CR" to end of alpha code.
Example: VHCCR72-82-15W-44-33-NL

Note: Setters with angle ball valve will be reduced port unless otherwise requested. Reduced port valves usually provide suitable water flow. (Add "-FP" to the catalog number for full port.)

Meter Valve Options for 70-80 Series Coppersetters: Seal Wire Hole in Inlet Valve, Seal Wire Hole in Check Valve

The Ford 90 Series Coppersetter

For 5/8", 5/8"x3/4", 3/4" or 1" Meter Size

Each conduit of the 90 Series Coppersetter is one piece of copper tubing and the two conduits are connected by a clamp. This flexible design provides adjustability to the space between service pipe ends during installation. The clamp is normally soldered permanently to the tubes but can be furnished with a bolted clamp so that the two conduits can be taken apart, if desired. An optional extended outlet leg provides customer side hook-up without disturbing the pit.

To order: Select one Catalog Number component from each of the three charts on pages 26 through 28 to arrive at the complete Coppersetter Catalog Number. Selection order of components:

1. Meter size and valve type page 26
 2. Coppersetter height page 26
 3. Service line connections page 27-28
- Options: Outlet extension, bolted clamp construction and brace eye ... page 28

Angle Ball, Angle Inverted Key
or Angle Compression Inlet
valves are available.

Meter outlet valves include all
available inlet valves plus:
Single Check Valve
Cascading Dual Check Valve
Cartridge Dual Check Valve

All Ford Coppersetters are
assembled with lead-free solder.

The largest variety of service line connections in the
waterworks industry. Compression, flared, threaded and
double purpose couplings for copper, iron,
polyethylene and PVC.

81-44-NL	1" Male Iron Pipe Union Swivel	1" Double Purpose Union Swivel Δ

Δ Double Purpose Union Swivels will accommodate male iron pipe threads or flare copper.

* **Grip Joint** for CTS and PE pipe is available. Add "-G" to the catalog number.

♦ **Quick Joint** is available. Add "-Q" to the catalog number.

▶ **Ultra-Tite** is available. Contact factory for more information.

NOTE: Ford Pack Joints for PVC are recommended for Schedule 40 and Schedule 80 pipe only.

Example: For vertical inlet, place a "Z" before any of the listed option codes.
Example: "ZA" is a vertical inlet and a 15" outlet tube extension.

Note: Brace eye is not available with vertical inlet.

OPTIONS FOR 90 SERIES COPPERSETTERS	EXTENSION TO CATALOG NUMBER
Brace Eye	Add "E" to Cat. No.

18" inlet and outlet tube extensions & bolted clamp	Add "SJ" to Cat. No.
Vertical Inlet	Add "Z" to Cat. No.

Ford Tandem Coppersetters

Designed to solve problems resulting from excessive water pressure, the Tandem Coppersetter holds a pressure regulator just ahead of the water meter – all in one compact, quickly-installed Ford Coppersetter device. Pressure of the water flow through the meter and customer service lines is thereby easily reduced.

This space-saving unit is designed for installation in a single meter pit, frequently as small as 20" in diameter. Ford recommends service lines and valves be set at a minimum of 2" from the pit wall to help prevent freezing.

HOW TO ORDER

Select Coppersetter Series desired. Add the letter "T" before Catalog Number selected. EXAMPLE: TV72-18W-21-33-NL = Valve type Tandem Coppersetter for 5/8" x 3/4" meter, 18" high with 3/4" flared copper inlet and with double purpose union swivel outlet. Tandem Coppersetters include an "S" tube and male iron pipe adapters for holding a pressure regulator. Unless specified otherwise, standard Tandem Coppersetters are designed to hold a water meter in series with a pressure regulator.

PRV Lengths and Spacing for Standard Tandem Coppersetters and Resetters

PRV side of Tandem Standard Setter			
METER SIZE	STANDARD SPACING	FNPT PRV LENGTH TO USE WITH STANDARD ADAPTERS	STANDARD ADAPTER
5/8"	7-1/2"	4-3/4"	RA-1-NL
5/8" x 3/4"	7-1/2"	4-3/8"	RA-2-NL
3/4"	9"	5-7/8"	RA-2-NL
1"	9"	5-19/32"	RA-4-NL

5/8" - 1" Tandem Setters built for standard length PRV's with FNPT end-connections **include regulator adapters and "S" tube**. For PRV lengths with end connections other than FNPT or lengths other than what is listed in the above table, contact factory for price and availability.

If ordering non-standard PRV spacing, add PRV length to the catalog number.

Examples: TVBH72-15W-11-33-6-5-NL (6-1/2" PRV spacing) TVBH74-18W-44-44-LRA-9-5-NL (9-1/2" PRV spacing without adapters)

Minimum Height on Tandem Coppersetters and Resetters with Cartridge Dual Check Valve		
Tandem Coppersetter or Resetter	Meter Size	*Minimum Height

ST-4	1"	2.5

Ford Linesetters

The Ford Linesetter is an economical way to support the meter and speed meter changeouts in areas where shallow service line depths are possible. The short rise provided by the Linesetter helps keep the meter out of the dirt at the bottom of the meter box, and the setter assembly supports the service line. Cut-in style Linesetters can be used when installing meters in previously unmetered services, and eliminate the need to flare or thread old service lines.

LSV11-233W-NL

The LSV11-233W-NL is an example of a Linesetter for a 5/8" x 3/4" meter. Service line connections are double purpose. Brace eyes optional.

LSV44-444W-NL

The LSV44-444W-NL is an example of a Linesetter for a 1" meter. Service line connections are Pack Joint for CTS. Brace eyes are standard on all Linesetters for 1" meters.

LSAV21-233W-NL

The LSAV21-233W-NL is an example of a Angle Inlet Linesetter for a 5/8" x 3/4" meter. Service line connections are an angled flare copper inlet by double purpose outlet. Contact factory for optional brace eye.

Coppersetters for 1-1/2" & 2" Flanged Meters

Information for 1-1/2" & 2" Coppersetters

Specifications:

Ford Coppersetters are constructed from UNS/CDA No. C89833 no lead brass alloy (AWWA specification C800) and copper tubing. All Ford 1-1/2" and 2" Coppersetters are individually factory tested for water-tightness before shipment.

Individualized setting requirements can be satisfied using special Ford Coppersetters. We welcome the opportunity to solve your 1-1/2" and 2" setting problems.

1. Inlet valve options are a flanged angle inverted key or flanged angle ball valve.
2. All inlet valve options are also available on outlet* (see note below) - A flanged angle check outlet valve or a flanged angle dual check valve is available.
3. By-pass includes a Ford Ball Valve with padlock wings. An optional dual check valve in the by-pass is available. A high by-pass is also available. See photo below.
4. Brace pipe eyelets are standard on 70 and 70-80 Series - brace pipe not included.
5. Different meter flange spacing may be specified. Standard spacing for 1-1/2" meter setters is 13" and 17" for 2" meters.
6. All 1-1/2" and 2" meter flange valves on Coppersetters have meter support brackets.

* **NOTE:** 1-1/2" and 2" outlet ball valves may be used as customer shut-offs (on the customer side of the meter). The flange inverted key angle valves should **not** be used as customer shut-off on the customer side of the meter.

NOTE: 1-1/2" and 2" Tandem Coppersetters are available, add "T" to the beginning of the catalog number. Minimum rise of Tandem Coppersetter is 18". Contact factory with meter and PRV information.

HIGH BY-PASS OPTION

A high by-pass option is available on 1-1/2" and 2" Ford Coppersetters with a 12" minimum height.

To order: add "HB" to catalog number. Example: VV77-18HB-11-77-NL

Coppersetters for 1-1/2" & 2" Flanged Meters

Coppersetter Installation Instructions

Refer to the Ford Meter Box website (www.fordmeterbox.com) for additional and most recent instructions and product information.

1. **CHECK LAYING LENGTH OF METER WITH SETTER DIMENSIONS (#1).**
Adjustments to setter meter length may be made as follows:
 - A. **LOOSEN PACK JOINT (#2) AND ADJUST SETTER LENGTH TO FIT METER BY INSTALLING PROPER IDLER OR METER (with gaskets).** This ensures proper spacing and alignment of the setting prior to connecting the service lines.
 - B. If a shorter meter is used, cut the copper tubing (#3). Copper tubing should extend a minimum of 1/2" beyond the Pack Joint gasket when the meter is fully installed.
 - C. Tighten Pack Joint (#2) nut and tighten screw according to the Pack Joint installation instructions.
2. Cut two pieces of 1" pipe 18" long and install through the brace eye supports (#4).
3. Be sure the Coppersetter is installed in the correct position in relation to the water flow and make sure the bypass valve is in the **OFF** position. **Note:** 1-1/2" and 2" angle key valves should not be used as a customer shut-off on the customer side of the meter. Angle ball valves are to be used for this purpose.
4. Use a good quality pipe sealant or Teflon tape when attaching fittings to female iron pipe inlet and outlet threads. Follow the compression connection installation instructions if supplied with compression connections.
5. Special Ford drop-in gaskets are included with each setter for use when installing the water meter. Meter support brackets (#5) may need to be loosened or removed due to variations in the shape of water meter flanges.

High Bypass Coppersetter Installation Instructions

Refer to the Ford Meter Box website (www.fordmeterbox.com) for additional and most recent instructions and product information.

1. **CHECK LAYING LENGTH OF METER WITH SETTER DIMENSIONS (#1).**
Adjustments to setter meter length may be made as follows:
 - A. **LOOSEN PACK JOINT (#3) ON COPPERSETTER BRACE BAR AND ON BYPASS BALL VALVE (#2) AND ADJUST SETTER LENGTH TO FIT BY INSTALLING PROPER IDLER OR METER (with gaskets).** This ensures proper spacing and alignment of the setting prior to connecting the service lines.
 - B. If a shorter meter is used, cut the copper tubing (#2 and #3). Copper tubing should extend a minimum of 1/2" beyond the Pack Joint gasket when the meter is fully installed.
 - C. Tighten all Pack Joints (#2 and #3) (according to the Pack Joint installation instructions) with meter or meter idler in place.
2. Cut two pieces of 1" pipe 18" long and install through the brace eye supports (#5).
3. Be sure that the Coppersetter is installed in the correct position in relation to water flow and make certain the bypass valve is **OFF**. **Note:** 1-1/2" and 2" angle key valves should not be used as a customer shut-off on the customer side of the meter. Angle ball valves are to be used for this purpose.
4. Use a good quality pipe sealant or Teflon tape when attaching fittings to the female iron pipe inlet or outlet threads. Follow the compression connection installation instructions if supplied with compression connections.
5. Special Ford drop-in gaskets are included with each Coppersetter for use when installing a water meter. Meter support brackets (#4) may need to be loosened or removed due to variations in shape of water meter flanges.

70 Series Coppersetters for 1-1/2" & 2" Flanged Meters

Horizontal inlet and outlet

Unless otherwise specified - Standard meter spacing for: 1-1/2" Coppersetters = 13"
2" Coppersetters = 17"

Note: 1-1/2" and 2" Coppersetters with a valve on the outlet are standard **with** a by-pass. The by-pass feature can be deleted by omitting the "B" from the middle of the catalog number. Example: VBHH76-12-11-66-NL. For by-pass with 1" Cartridge Dual Check Valve, insert "HC" after the "B."
Example: VBHH77-12BHC-11-77-NL.

* **Grip Joint** for copper or plastic tube (CTS) is available. Add "-G" to the catalog number.

Shown with cartridge dual check valve in by-pass. See information below to order this feature.

Options Available

An optional high by-pass is available when standard by-pass is difficult to reach, see page 45.

Various types of couplings that will adapt to the FIP service line threads can be found on page 46.

Contact factory for heights not listed and availability of No-Rise Coppersetters.

70-80 Series Coppersetters for 1-1/2" & 2" Flanged Meters

24"	VBHH86-24B-11-66-NL	28.0	VBHH87-24B-11-77-NL	34.0
27"	VBHH86-27B-11-66-NL	29.0	VBHH87-27B-11-77-NL	34.0

Note: 1-1/2" and 2" Coppersetters with a valve on the outlet are standard **with** a by-pass. The by-pass feature can be deleted by omitting the "B" from the middle of the catalog number. Example: VBHH86-12-11-66-NL. For by-pass with 1" cartridge dual check valve, insert "HC" after the "B." Example: VBHH86-12BHC-11-66-NL.

Options Available

An optional high by-pass is available when standard by-pass is difficult to reach, see page 45.

Various types of couplings that will adapt to the FIP service line threads can be found on page 46.

Contact factory for heights not listed and availability of No-Rise Coppersetters.

Shown with cartridge dual check valve in by-pass. See information at left to order this feature.

Shown with cartridge dual check valve in by-pass. See information at left to order this feature.

Coppersetters for 1-1/2" & 2" Flanged Meters

Options

Dual Check Valve with Test Port Option

1-1/2" and 2" Coppersetters with an angle dual check valve with a convenient integral 1-1/2" test port for on-site testing allows the utility to confirm meter accuracy without removal of the meter, saving time and money. This option includes a shut-off ball valve (with handle) directly beneath the dual check valve. The shut-off valve isolates the meter from service use. It will also permit service use during the meter test by opening an optional by-pass.

To Order: add "-TP6" to the catalog number.

Example: VBHH77-14B-11-77-TP6-NL.

Note: Minimum height with standard by-pass (or no by-pass) is 14".

Minimum height with high by-pass is 18".

High By-Pass Option

1-1/2" and 2" Coppersetters (minimum 12" height) are available with an optional "high by-pass." This option is popular with taller Coppersetters or when a standard by-pass is difficult to reach.

To Order: add "HB" to catalog number.

Example: VV86-18HB-11-66-NL.

By-Pass With Cartridge Dual Check Valve Option (Available with Standard or High By-Pass Options)

To Order: Place "HC" after the "B" by-pass designator.

Examples: Standard by-pass – VBHH87-18BHC-11-77-NL

High by-pass – VBHH87-18HBHC-11-77-NL

Note: Dual check valve option recommended. Drawing at right shows with dual check valve in by-pass.

Coppersetters for 1-1/2" & 2" Flanged Meters

Options

1-1/2" & 2" 70 Series Coppersetter Tees

CATALOG NUMBER	DESCRIPTION
○ CSTEE-6-T-CR-NL	1-1/2" Horizontal Inlet Coppersetter Tee

○ CS8-77-CR-NL	2" Solder valve bushing for 2" copper
T184-664-NL	High By-Pass Tee for 1-1/2" Coppersetter
T184-774-NL	High By-Pass Tee for 2" Coppersetter

Optional Couplings

1-1/2" & 2" Coppersetters with FIP only end connections can be connected to other types of service lines by use of the couplings listed below. (complete listing in Catalog Section J)

FOR CONNECTING TO:	1-1/2" COUPLING	2" COUPLING
Copper or Plastic Tube*	C84-66-NL	C84-77-NL
PVC Pipe	C87-66-NL	C87-77-NL
PE Pipe	C86-66-IDR7-NL	C86-77-IDR7-NL
Iron Pipe	C85-66-NL	C85-77-NL
Flared Copper	C28-66-NL	C28-77-NL

* **Grip Joint** for copper or plastic tube (CTS*) is available.

Add "-G" to the catalog number.

- **Attention:** Special solder and procedures are required for best results. Contact factory or see website for installation instructions.

Ford 30 Series Flexible Resetter

Under some conditions the resetting and raising of a too-low meter can be accomplished most easily if the Resetter provides for flexibility in the spacing of the threaded ends which connect to the existing meter couplings. The Flexible Resetter is designed for easy installation in such settings and still maintains proper spacing and alignment for the meter in the raised position. Flexible Resetters are available with a variety of valve options.

To order: Select one Catalog Number component from each of two charts on page 48 to arrive at the complete Resetter Catalog Number. Selection order of components:

1. Meter size and valve type
2. Resetter height

Example of Catalog Number for a 30 Series Flexible Resetter

The description for the above catalog number reads: 30 Series Flexible Resetter for 5/8" meter with an Angle Ball Meter Valve on the inlet, and an Angle Dual Check Valve on the outlet, 12 inches high.

* Ford Meter Box no-lead brass products manufactured from UNS/CDA No. 89833 alloy shall contain no more than 0.25% total lead content by weight. United States federal and state laws allow the use of products manufactured from UNS C83600 85-5-5-5 brass alloy for only non-potable water systems within the United States.

NOTES:

1. All valve type setters are standard with padlock wings.
2. All solder joints for Ford meter setters are made with lead-free solder.
3. All 30 Series Flexible Resetters are supplied with meter gaskets and resetter gaskets.
4. Gaskets for Ford meter setters are listed on page 5.

METER SIZE & VALVE TYPE 1ST PART OF CATALOG NUMBER

The Ford 30 Series Flexible Resetter

METER SIZE & VALVE TYPE - (FIRST PART OF CATALOG NUMBER)

CATALOG NUMBER (METER SIZE AND VALVE TYPE)				DESCRIPTION	
FOR 5/8"	FOR 5/8"x 3/4"	FOR 3/4"	FOR 1"	INLET VALVE	OUTLET VALVE

VBHC31**	VBHC32**	VBHC33**	VBHC34**	Ball	● Cartridge Dual Check

* Compression valve does not have padlock wing.

** 30 Series Flexible Resetters with cartridge dual check valve have a 15" minimum height for 5/8", 5/8" x 3/4" and 3/4" meters and 18" minimum height for 1" meters.

*** The 5/8" port angle ball valve is a one-way directional valve designed for the inlet side of the meter and should not be used as a customer shut-off on the customer side of the meter.

▼ Angle cascading dual check valves contain 3/4" internal components. This valve meets the ASSE flow requirements of a 1" valve. For a full port valve, order the cartridge style check valve.

● Cartridges with enhanced chlorine/chloramine resistance are available. Add "CR" to end of alpha code.
Example: VHC3CR32-15W-NL

Note: Setters with angle ball valve will be reduced port unless otherwise requested.

Reduced port valves usually provide suitable water flow. (Add "-FP" to the catalog number for full port.)

Meter Valve Options for 30 Series Flexible Resetters: Seal Wire Hole in Inlet Valve, Seal Wire Hole in Check Valve

HEIGHT OPTION FOR 30 SERIES COPPERSETTERS

Coppersettters are available in heights over 24" in 3" increments; 27", 30", 33" etc.
To order put desired height in catalog number. EXAMPLE: V32-33W-NL is a 33" high setter.

The Ford 40 Series Resetter

Correcting low settings with the Ford Resetter is quick and easy. The meter is removed, the Resetter bar connected in the position formerly occupied by the meter, and the meter reset in the raised position. No new pipe joints are necessary. The reset meter is cleaner, easier to read, and much simpler to change.

When the old service valve is in poor condition or poor location, the Resetter with one or two valves provides convenient control, putting the valve or valves at the most accessible location. An outlet valve prevents draining the customer's service when the meter is removed. Resetters, either plain or valve type, are inexpensive when compared to any other means of obtaining these results.

The brass bar of the Resetter is the same length and has the same threads as the meter to be reset. Gaskets are furnished for connecting the bar between the old meter couplings. Refer to page F-6 for Tie Bar requirements for Resetter heights above 15".

To order: Select one catalog number component from each of two charts on page 52 to arrive at the complete Resetter catalog number. Selection order of components:

1. Meter size and valve type
2. Resetter height

The Ford 40 Series Resetter

Before

This drawing is typical of the position (but not the condition) of meters set too low. Such meters are frequently covered by mud or water, are difficult to read quickly and accurately and, being troublesome to change, tend to be left in place when needing repair.

After

The benefit of the Resetter is shown below. The meter stays cleaner, is easier to read and much easier to change. The valve, included on the Resetter in this case, is easily accessible. The economic return of resetting meters can be surprisingly substantial.

Change-over Resetters

Many water utilities are changing domestic meter sizes from 5/8" to 5/8"x3/4". For raising a too-low meter and converting to the larger meter, the Resetter has a 5/8" bottom bar and 5/8"x3/4" coupling nuts. To order a Change-over Resetter place a "B" at the end of the catalog number. Example: V42-7W-B1-NL is a Change-over Resetter to replace a 5/8" meter with a 5/8"x3/4" meter. Special Resetters are also available for reducing from 3/4" to 5/8"x3/4" or from 1" to 3/4". Solutions to many meter resetting problems are considered upon request.

HEIGHT INFORMATION FOR 40 SERIES COPPERSETTERS:

- Contact factory for availability of heights not listed.
- Resetters are available in heights over 24" in 3" increments; 27", 30", 33" etc. To order, put desired height in catalog number. Example: V42-30W-NL is a 30" high Resetter.
- See table on page 6 for Tie Bar requirements.

Resetters for 1-1/2" & 2" Flanged Meters

Information for Resetters

Specifications:

Ford Resetters are constructed from UNS/CDA No. C89833 no-lead brass alloy (AWWA specification C800) and copper tubing. All 1-1/2" and 2" Ford Resetters are individually factory tested for water-tightness before shipment.

Individualized resetting requirements can be satisfied using special Ford Resetters. We welcome the opportunity to solve your 1-1/2" and 2" resetting problems.

1. Inlet valve options are a flanged angle inverted key or flanged angle ball valve.
2. All inlet valve options available on outlet* (see note below) - flanged angle check valve or flanged angle dual check valve is available.
3. Optional by-pass includes a Ford Ball Valve with padlock wings.
4. Brace pipe eyelets are standard - brace pipe not included.
5. Different bottom and top flange spacing may be specified. Standard spacing for 1-1/2" meter Resetters is 13", 17" for 2" meter Resetter.
6. All 1-1/2" and 2" meter flange valves on Coppersetters have meter support brackets.

Installation Instructions

1. **COMPARE LAYING LENGTH OF METER WITH SETTER DIMENSION BETWEEN INLET AND OUTLET (#1).**
2. Cut two pieces of 1" pipe 18" long and install through the brace eye supports (#2).
3. Be sure that the Resetter is installed in the correct position in relation to the water flow and make sure the bypass valve (#3) is in the **OFF** position.*
4. Special Ford drop-in gaskets are included with each setter for use when installing the water meter. Meter support brackets (#4) may need to be loosened or removed to accommodate variations in the shape of water meter flanges.

* **NOTE:** 1-1/2" and 2" outlet ball valves may be used as customer shut-offs (on the customer side of the meter). The flange inverted key angle valves should **not** be used as customer shut-off on the customer side of the meter.

Resetters for 1-1/2" & 2" Flanged Meters

Without By-Pass

Standard meter spacing for 1-1/2" and 2" resetters will be 13" and 17" respectively unless otherwise specified.

Ford No-Rise Setter

for 1-1/2" and 2" Meters

Offered in many custom sizes, types and configurations, the Ford No-Rise Setter offers the same Ford quality as copper setters for in-line applications.

Contact factory for pricing and availability.

70 Series Style Setter

Type of meter inlet valve & outlet valve

- VB** = inlet ball valve & outlet meter flange
- VBB** = inlet ball valve & outlet ball valve
- VBH** = inlet ball valve & outlet single check valve

80 Series Style Setter

Type of meter inlet valve & outlet valve

- *V** = inlet angle key valve & outlet flanged ell
- *VV** = inlet angle key valve & outlet angle key valve
- *VHH** = inlet angle key valve & outlet angle dual check valve
- VB** = inlet angle ball valve & outlet flanged ell
- VBB** = inlet angle ball valve & outlet angle ball valve
- VBH** = inlet angle ball valve & outlet angle check valve

Ford No-Rise Coppersetter Numbering System

Service line connection type

- 1** = Female iron pipe
- 4** = Pack Joint for CTS (2" only)
- 7** = Pack Joint for PVC pipe (2" only)

Service line connection size

- 6** = 1-1/2"
- 7** = 2"

Style of Setter

- 7** = 70 series
- 8** = 80 series

Meter size

- 6** = 1-1/2" meter
- 7** = 2" meter

Inlet
Outlet

Inlet
Outlet

VBB77-00B-44-77-G-NL

Height

- 00** = no rise (70 series)
- 05** = 5" rise (80 series, 1-1/2")
- 06** = 6" rise (80 series, 2")

B = By-pass (Always)

BHH = By-pass with check valve

Options

-G = Grip Joint compression nut (2" only)

-NL = No Lead alloy

* VV86, V86, and VHH86 will have a 6" rise.

The Ford Tandem Resetters and Types A and B Resetters

Tandem Resetters can be used to install in series:

1. Two meters for comparing registration
2. A meter and a recording meter
3. A meter and a pressure or recording gauge
4. A meter and a pressure regulator

Tandem Resetters have a bottom bar equal in length and thread size to a given size of water meter. This permits easy connection with existing meter couplings or meter holding devices.

When a meter is to be installed in series with some device other than a second meter, it may be necessary to use extensions or adapters on the device to achieve the correct length and thread size to fit the Tandem Resetter. If necessary, special Tandem Resetters can be produced to specific dimensions.

Type A Tandem Resetter

(double end connection is included)

CATALOG NUMBER	METER SIZE
Resetter-1A-NL	5/8"
Resetter-2A-NL	5/8"x3/4"
Resetter-3A-NL	3/4"
Resetter-4A-NL	1"

The Type A Tandem Resetter places meters (or a meter and a second device) in a straight line. Special spacing of end connections can be manufactured upon request. The double end connection used between the meters is included with the Resetter.

Double End Connection Only

(for connecting meters)

CATALOG NUMBER	METER SIZE
DEC-1-NL	5/8"
DEC-2-NL	5/8"x3/4" & 3/4"
*DEC-3-AWT-NL	1"

*Consists of two components assembled watertight.

Type B Tandem Resetter

The Type B Tandem Resetter places meters (or a meter and a second device) in a parallel position. It is satisfactory for shallow pit installations or for basement installations.

CATALOG NUMBER	METER SIZE
Resetter-1B-NL	5/8"
Resetter-2B-NL	5/8"x3/4"
Resetter-3B-NL	3/4"

Ford Coppersetters, Linesetters and Resetters

Warranty

All merchandise is warranted to be free from defects in material and factory workmanship for one year from date of shipment from our factory. We will provide, free of charge, new products in equal quantities for any that prove defective within one year from date of shipment from our factory. Manufacturer shall not be liable for any loss, damage, or injury, direct or consequential, arising out of the use of or the inability to use the product. Before using, user shall determine the suitability of the product for user's intended use and user assumes all risk and liability whatever in connection therewith. No claims for labor or consequential damage will be allowed. The foregoing may not be changed except by agreement signed by an officer of the manufacturer.

No other warranties are applicable or may be implied, including the implied warranty of merchantability and the implied warranty of fitness for particular purpose and any warranty relating to infringement or the like, all of which are disclaimed.

Parties responsible for monitoring and maintaining proper water system design must exercise full responsibility in understanding and upholding the full intent and scope of applicable lead laws.
